# The Deal

Get yourself a nice cut!

Arnold Abraham - 19. Januar 2021

Proposal

The pirates went away and paid for the hideout taxes.

„A pirate does always pay his debts."

But the Padre wouldn't be named Luigi and would not be a crafty sly dog if he refuses to hand over 20% of each payout.

He suggests the deal that we can have 100% of the padre's payout for each rum barrels aggregated sell price above 650 gold.

We need to be quick, we got his books in our hands!

Task

Query the existent database to make sure this is a good deal or not. Use HAVING to filter already aggregated data.

The database is attached and is named ,RumHideout.db'.

Make the result table like this:

	BELONGSTO	KINDOFRUM	SELLPRICE	HIDINGTAXES	PADREPAYOUT	CUTOFF	BARRELS
1	BERNAL KLARK	NAVY RUM	1342	19	254.98	51	3
2	BERNAL KLARK	VINTAGE RUM	991	19	188.29	37.66	2
3	BLACKBEARD	CLEAR RUM	843	17	143.31	28.66	2
4	BLACKBEARD	DARK RUM	1137	17	193.29	38.66	2

Tips

- We don't write a query to compare the Payout with the deal. After queuing against the database it should be obvious if this is a deal or not
